## E-FEED AP Series

### E-FEED AP Series

The Electron E-COAT AP Master series range of equipment is suitable for both manual and automatic applications. The AP Series rapidly applies powder on difficult coating surfaces, due to the dense phase powder feed pump. The dense phase transportation of powder allows the user precise control of the velocity of the powder on to the part. Coating thickness is easily achieved with repeatability and control due to the elimination of the Venturi Style pump.

The Electron Master E-FEED AP pump allows the user to achieve the best possible finish with ultimate control.

### E-FEED AP Series

- Easy maintenance ( Easy changeable manifold design)
- 400 gr/min maximum powder output (single operation)
- 700 gr/min maximum powder output (dual operation)
- No performance decrease
- Constant powder output
- Constant coating thickness
- Constant powder savings
- Repeatable coating results
- Constant quality
- Ideal powder charging in all conditions
- Highest transfer efficiency
- Linear powder flow
- ATEX || 3D protection
